

1. XM radio and it's services are comparable to none! if you do any traveling it is critical and could be time and life saving. i no longer have to mess with changing or finding stations as i drive because i am listening to what i want instead of flipping channels for info or the music i want. and the signal is almost always there... we don't have to fumble around as we cross the country trying to find local info. and if you have ever travelled with several small children in the car XM can save your sanity from sitting in traffic or venturing into life threatening weather.

2. it is my money! and if i want to pay for the wonderful traffic and weather services... it is my right to get them from XM... there is no alternative! Please DO NOT take away my right to get all these services in one place.

3. when i first got XM everyone laughed that i paid for radio... but it is so much more than radio... it is everything we need when we are in the car all in XM. (i remember when people laughed at cable TV, i mean why would anyone PAY for television!) as my friends see how much more than radio it is and all it does... well, no one is laughing anymore and i am always 'volunteered' to be the driver.

PLEASE reject NAB's petition 04-160! and support XM!
